Interface

C routine

```
f(buf, shls, atm, natm, bas, nbas, env);
```

- buf: column-major double precision array.
  - for 1e integrals of shells (i,j), data are stored as `[i1j1 i2j1 ... ]`
  - for 2e integrals of shells (i,j|k,l), data are stored as `[i1j1k1l1 i2j1k1l1 ... i1j2k1l1 ... i1j1k2l1 ... ]`
  - complex data are stored as two double elements, first is real, followed by imaginary, e.g. [Re Im Re Im . . .]
- shls: 0-based basis/shell indices.
  - int[2] for 1e integrals

- int[4] for 2e integrals

- atm: int[natm*6], list of atoms. For ith atom, the 6 slots of atm[i] are
  - `atm[i*6+0]` nuclear charge of atom i
  - `atm[i*6+1]` env offset to save coordinates (`env[atm[i*6+1]]`, `env[atm[i*6+1]+1]`, `env[atm[i*6+1]+2]`) are (x,y,z)
  - `atm[i*6+2]` nuclear model of atom i, = 2 indicates gaussian nuclear model
  - `atm[i*6+3]` unused
  - `atm[i*6+4]` unused
  - `atm[i*6+5]` unused
- natm: int, number of atoms, natm has no effect **except nuclear attraction** integrals
- bas: int[nbas*8], list of basis. For ith basis, the 8 slots of bas[i] are
  - `bas[i*8+0]` 0-based index of corresponding atom
  - `bas[i*8+1]` angular momentum
  - `bas[i*8+2]` number of primitive GTO in basis i
  - `bas[i*8+3]` number of contracted GTO in basis i
  - `bas[i*8+4]` kappa for spinor GTO.
    < 0 the basis ~ j = l + 1/2.
    > 0 the basis ~ j = l - 1/2.
    = 0 the basis includes both j = l + 1/2 and j = l - 1/2
  - `bas[i*8+5]` env offset to save exponents of primitive GTOs. e.g. 10 exponents `env[bas[i*8+5]]` ... `env[bas[i*8+5]+9]`
  - `bas[i*8+6]` env offset to save column-major contraction coefficients. e.g. 10 primitive -> 5 contraction needs a 10 × 5 array

```
env[bas[i*8+6]]   | env[bas[i*8+6]]+10 |     | env[bas[i*8+6]]+40
env[bas[i*8+6]]+1 | env[bas[i*8+6]]+11 |     | env[bas[i*8+6]]+41
 .                |  .                 | ... |  .
 .                |  .                 |     |  .
env[bas[i*8+6]]+9 | env[bas[i*8+6]]+19 |     | env[bas[i*8+6]]+49
```

```
- ‘bas[i*8+7]‘ unused
```

- nbas: int, number of bases, nbas has no effect
- env: double[], save the value of coordinates, exponents, contraction coefficients

Fortran routine

```
call f(buf, shls, atm, natm, bas, nbas, env)
```

- atm and bas are 2D integer array
  - atm(1:6,i) is the (charge, offset_coord, nuclear_model, unused, unused, unused) of the ith atom
  - bas(1:8,i) is the (atom_index, angular, num_primitive_GTO, num_contract_GTO, kappa, offset_exponent, offset_coeff, unused) of the ith basis
- parameters are the same to the C function. Note those offsets atm(2,i) bas(6,i) bas(7,i) are 0-based.
- buf is 2D/4D double precision/double complex array

Supported angular momentum

- 1e integrals $l_{max} = 6$
- 2e integrals $l_{max} = 4$

Data ordering

- for Cartesian GTO, the output data in buf are sorted as

s shell	p shell	d shell	...
...	...	...	
s	p x	d xx	
s	p y	d xy	
...	p z	d xz	
	p x	d yy	
	p y	d yz	
	p z	d zz	
	...	...	

- for real spheric GTO, the output data in buf are sorted as

s shell	p shell	d shell	f shell	...
...	...	...	...	
s	p y	d xy	f $y(3x^2 - y^2)$	
s	p z	d yz	f xyz	
...	p x	d z^2	f yz^2	
	p y	d xz	f z^3	
	p z	d $x^2 - y^2$	f xz^2	
	p x	...	f $z(x^2 - y^2)$	
	...		f $x(x^2 - 3y^2)$	
			...	

- for spinor GTO, the output data in buf correspond to

...	kappa=0,p shell	kappa=1,p shell	kappa=0,d shell	...
	... $p_{1/2}(-1/2)$ $p_{1/2}(1/2)$ $p_{3/2}(-3/2)$ $p_{3/2}(-1/2)$ $p_{3/2}(1/2)$ $p_{3/2}(3/2)$ $p_{1/2}(-1/2)$ $p_{1/2}(1/2)$ $p_{3/2}(-3/2)$ $p_{3/2}(-1/2)$ ...	... $p_{1/2}(-1/2)$ $p_{1/2}(1/2)$ $p_{1/2}(-1/2)$ $p_{1/2}(1/2)$ $p_{1/2}(-1/2)$ $p_{1/2}(1/2)$ ...	... $d_{3/2}(-3/2)$ $d_{3/2}(-1/2)$ $d_{3/2}(1/2)$ $d_{3/2}(3/2)$ $d_{5/2}(-5/2)$ $d_{5/2}(-3/2)$ $d_{5/2}(-1/2)$ $d_{3/2}(-3/2)$ $d_{3/2}(-1/2)$ ...	

Tensor

integrals like Gradients have tensor components. the output data is

- 3-component tensor
  - X `buf(:,0)`
  - Y `buf(:,1)`
  - Z `buf(:,2)`
- 9-component tensor
  - XX `buf(:,0)`
  - XY `buf(:,1)`
  - XZ `buf(:,2)`
  - YX `buf(:,3)`
  - YY `buf(:,4)`
  - YZ `buf(:,5)`
  - ZX `buf(:,6)`
  - ZY `buf(:,7)`
  - ZZ `buf(:,8)`
